

Digital Services

Validation Gateway

EIDA provides identity authentication services through its state of the art Validation Gateway. This platform enables customers to use their EIDA issued identity card to complete transactions on private sector and government entity portals.

Card Readers

EIDA provides its customers with smart card readers to avail our digital services. Our readers are PC/FC compliant contact readers and have biometric reading capability.

Data Mapping

EIDA provides government and private sector entities data mapping services that allow customers to map legacy data with IDNs based on optimized algorithms.

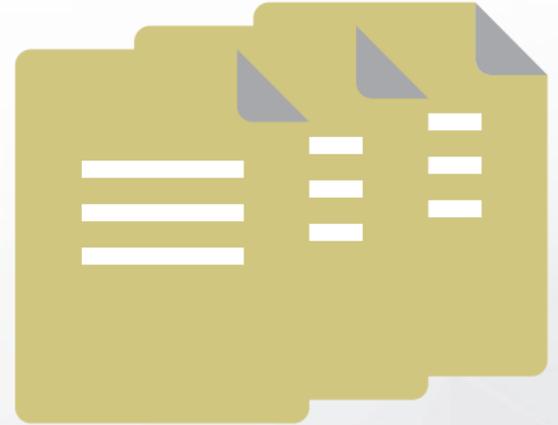

Statistics

EIDA provides government statistic bureaus reports on population demographics. EIDA has the state of the art statistics and Business Intelligence tools to extract, transform, and load demographic data.

Data Provisioning

EIDA provides government and private sector entities with data provisioning services that allow customers to submit certain mandatory data in order to receive additional information.

Data Verification

EIDA provides government and private sector entities with data verification services that allow customers to submit personal data to be verified by EIDA and receive a binary response on the validity of the information.

Data Verification

This Service is provided for Emirates ID external customers (Government entities and approved private sector entities) allowing them to verify the accuracy and validity of the information available with them with Emirates ID.
